# Labeling

The **Labeling** tab is used to customize the settings for labeling or annotation.

To change labeling settings, go to the **InfoWater Pro** tab > **Project** group, select the **Preferences** button, and then click on the **Labeling** tab in the dialog box.

Node Label Settings

Specify the settings for node labeling here. Once the symbol and placement for nodes are specified, click **Label Node with IDs** to label nodes. Nodes include junctions, pumps, valves, tanks, and reservoirs. Click **Clear Node ID Labels** to clear all labels for nodes.

> **Symbol** - The **Symbol** button launches the **Symbol Selector** dialog box. Specify the font, color, font size, font color, font fill style, and other advanced features here. All the options specified here will be used while labeling nodes.
>
> **Placement** - Use the **Placement** button to change the way how the node labels are placed.

Text Style Preview - Once the settings for node labels are changed, a preview of label texts is displayed in this box. If the text does not look right, click on the **Symbol** button to make the desired changes.

Pipe Label Settings

Specify the settings for pipe labeling here. Once the symbol and placement for pipes are specified, click **Label Pipe with IDs** to label pipes. Click **Clear Pipe ID Labels** to clear all labels for pipes.

Symbol - The **Symbol** button launches the **Symbol Selector** dialog. Specify the font, color, font size, font color, font fill style, and other advanced features here. All the options specified here will be used while labeling pipes.

Placement - Use the **Placement** button to change the way how the pipe labels are placed.

Text Style Preview - Once the settings for node labels are changed, a preview of label texts is displayed in this box. If the text does not look right, click **Symbol** to make the desired changes.

OK - Click **OK** to save and exit from the **Preferences** dialog box.

Cancel - Use this to exit without saving from the **Preferences** dialog box.
