

Scenario Management

Scenario Management is a must-have function when a hydraulic modeler analyzes and compares multiple alternatives with different demand, pump controls, tank sizes, etc. The **Scenario Explorer** of InfoWater Pro provides a robust mechanism that maintains data integrity, and a user-friendly interface.

To do any operations about scenarios, go to the **Model Explorer**, click **Scenario Explorer** to bring up the **Scenario Explorer**; or go to the **Model Explorer**, click **Command Center** tab on the bottom, navigate to the **Scenario group**, and click **Scenario Explorer**.
