

# Views Ribbon

The **Views Ribbon** provides options to open or select different windows in InfoDrainage as well as an easy way to [Change Layout](#) of the windows and configure the [Display Settings](#).

If the window is closed, then the buttons under the **Windows** category will open that window in its default position (this will be different if a layout has been selected). However, if the window is already open, then the button will select it instead.

## Windows

**Tree** - Opens or selects the Tree View. Default position is on the left side.

**Plan** - Opens or selects the Plan View. Default position is on the centre.

**3D** - Opens or selects the 3D View. Default position is on the centre.

**Toolbox** - Opens or selects the toolbox. Default position is on the right side.

**Properties** - Opens or selects the properties. Default position is on the right side.

## Settings

**Display Settings** – Opens the Display Settings form.

**Change Layout** - Drop-down list of layouts to choose from or add your own.
