

Manning Formula

The Manning Formula is used for Velocity calculations within the software.

$$V = \frac{1}{n} R^{\frac{2}{3}} S^{\frac{1}{2}}$$

where;

V =Velocity

n = Manning's roughness coefficient (see Pipe Roughness),

R = Hydraulic Radius,

S = Hydraulic gradient.

The above equation is in metre-per-second units but the n values are the same as those specified in the foot-per-second format of the equation (e.g. smooth concrete pipe n = 0.012 approximately). The formula is sometimes known as Strickler's formula and 1/n as the Strickler's coefficient.

A concrete pipe with a smooth interior would have a Manning's n of approximately 0.012.

Manning's n may be derived from 1/Strickler coefficient.
