

# Import Ribbon

The **Import** ribbon allows you to load information from file as either background data or actual design information.

## Background Data

**Surface Data** - Allows you to import and specify terrain information.

**CAD Data** - Allows you to import CAD Data as the background data.

**GIS Data** - Allows you to import GIS Data as the background data.

**Images** - Allows you to import background images.

## From MicroDrainage

**Import Design** - Allows you to import a MicroDrainage file.

## From LandXML

**Import Pipe Network** - Allows you to import a pipe network from a LandXML file.

## From CAD

**Inflows** - Allows you to import Inflows using the **CAD Import** wizard.

**Stormwater Controls** - Allows you to import StormWater Controls using the **CAD Import** wizard.

## From GIS

**Inflows** – Allows you to import Inflows using the **GIS Import** wizard.

**Junctions** – Allows you to import Junctions using the **GIS Import** wizard.

**Stormwater Controls** – Allows you to import Stormwater Controls using the **GIS Import** wizard.

**Connections** – Allows you to import Connections using the **GIS Import** wizard.

## From Text

**Inflows** – Allows you to import Inflows using the **CSV Import** wizard.

**Junctions** – Allows you to import Junctions using the **CSV Import** wizard.

**Stormwater Controls** – Allows you to import Stormwater Controls using the **CSV Import** wizard.

**Connections** – Allows you to import Connections using the **CSV Import** wizard.
